a conservative plan. . . Author is to be congratulated on getting so much information authoritatively and readably put together: the book is indispensable to any geological or general science library." K. S. S. +

Nature, My 15 '37, p. 817, 1 p. "When the first edition of the 'Quarternary Ice Age' was published in 1914, it took its place at once as the standard English textbook on the subject. . . Of the 24 chapters of the second edition, only a few are reprinted in their original form; most have been expanded and brought up to date, and some are new. A considerable increase in size of the volume is the result; many new illustrations and the useful bibliographies now added to each chapter will be a great help to students. . . . At the end of the volume are accounts of the author's isokinetic theory of oscillations of sea-level and of the post-glacial changes of climate in Europe." +

"A voyage of over 22,500 miles in a 1,000-ton submarine provides the subject matter for this book, which is written in the Dutch language and likely to prove of considerable interest to those who can read it. The craft which accomplished this trip is K. XVIII, of the largest type in the Koninklijke Nederlandse Marine. . . There is a detailed description of the submarine and her equipment. . . To those who wish to know what a big modern submarine is like, and what life on board means during long passages, we recommend the book with confidence." +

This is done by means of many accounts of individual and community behavior, skillfully chosen to give a grasp and appreciation of general concepts and principles. The aim is well in line with current efforts to give high school and college students a new approach to the social studies. . . Ends on a constructive note, outlining the steps (survey, research, planning, public opinion, and legislation) by which culture progress can be attained." +
